

On tool extraction kit

Dust extraction at source is the most effective method to capture dust when grinding, sanding and cutting.

Example picture

Nederman attachment kits for hand-held tools, remove dust very efficiently during grinding, sanding and cutting. These operations create large amounts of dust. Airborne dust and fine particles can be hazardous to the human health and should be extracted at source before it reaches the breathing zone. The operator should always be protected from inhaling dust. On-tool extraction provides effective extraction and also ensures excellent freedom of movement and operator flexibility. Nederman attachment kits can be attached to both electric and pneumatic tools.

- Any dust created is captured at source
- High visibility while working
- Simplifies keeping your workplace clean
- Extensive range for all kinds of tools

Product name	On tool extraction kit
Diameter, hose (mm)	38
